

Your Trusted Security Design Partner

Security Advisors Consulting Group

CRIME PREVENTION THROUGH ENVIRONMENTAL DESIGN

The discipline of Crime Prevention Through Environmental Design or **CPTED** (pronounced sep'ted) is the study of utilizing the elements of territoriality, natural surveillance, and natural access control in the design of a property to make it unattractive to the criminal, reducing their perception of opportunity and convincing them not to commit the crime, or redirecting them to commit their crime in another more desirable location.

At SACG we have been certified in the use of CPTED through the American Crime Prevention Institute (ACPI) and have utilized CPTED methodologies extensively for clients in a number of industries.

SECURITY DESIGN & PROJECT MANAGEMENT SOLUTIONS

The total cost of security for construction projects can usually be significantly reduced through use of CPTED principles and by involving a qualified security professional early in the construction planning process.

Security Advisors Consulting Group will work with your architects and general contractors to ensure that appropriate security elements are in place, help establish standards for physical security, assist in development in RFPs, and oversee final commissioning of systems.

The Team at Security Advisors Consulting Group has extensive experience in designing and implementing physical security solutions for new construction and remodeling projects.

We have been involved in the implementing security projects from conceptual design through final punch list sign-off for projects including:

- Hospitals
- Medical office buildings
- Schools
- College campuses
- Government facilities
- Corporate offices
- Retail
